## ChromXcel™ HPLC Columns Made From Ultra-high Purity Silica:

- These columns utilize exceptionally pure silica particles, minimizing impurities like metals that can interfere with separations.
- This high purity contributes to superior peak shapes, reduced peak tailing, and enhanced reproducibility, particularly when analysing polar compounds.
- These columns are valuable for applications requiring precise and reliable separations, offering excellent chemical inertness and consistent performance.
- These columns can be used in normal phase and also in reverse phase chromatography, and also in HILIC chromatography.
